

**RGBDigit datasheet**  
**1" full color single 7 Segment digit**  
 Adafruit NeoPixel Arduino library driven

**Description**

The RGBdigit consists of an empty 1" housing (see Package Dimensions) therein is a by RGBDigit.com designed PCB and a black stencil, glued with a transparent two-component epoxy which ensures that the PCB remains well in place and has a minimum possible crosstalks between the different segments.

With a serial control on Pin 2 Data-in and data-out Pin 5 can with the appropriate library Arduino (Adafruit NeoPixel) provide each segment with a color. Each segment has an R, G, B LEDs that can be adjusted in 255 steps and therefore 16,581,375 color combinations are available for each segment of the digit.

Also, the ability to control the brightness for all LED's driven at 255 steps within the library. It should be noted that my experience is that I rarely use brightness values above 80. Also in color mixing the three colors seldomly are equally brightly lit. These two arguments results in a moderate power consumption.

**RGBDigit features**

- Digit size 1 " = 25.40 mm
- Housing size 34.00 x 24.00 mm
- Full RGB colour Segment 0 to 255 16581375 gives colour combination's
- Adjustable brightness 0 to 255
- Simple wiring 3 in 3 out per digit
- 5V USB power supply
- Low power consumption see graph 1
- **Adafruit Arduino NeoPixel library driven**
- Black top surface with white diffused segments.
- Up to 10 digits cascading when using brightness < 80 and no full white collar's
- 330 ohm resistor in Di included

**Package Dimensions**

- Notes:
1. All dimensions are in millimeter.
  2. Unless otherwise stated, the tolerance is ± 0.25mm.
  3. there is a 330 ohm resistor included in the Data In line

**Pin function**

Pin 1	5 V	Pin 4	5 V
Pin 2	Data in	Pin 5	Data out
Pin 3	GND	Pin 6	GND

**Absolute Maximum Ratings**

Parameter	Symbol	Ratings	Unit
Power supply voltage	VDD	+3.5 ~ +5.3	V
Input voltage	VI	-0.5 ~ VDD+0.5	V
Operation junction temperature	Topt	-25 ~ +80	°C
Storage temperature range	Tstg	-55 ~ +150	°C

## Tech specs

- Up to 10 digits cascading when using brightness < 80
- Moderate Low power consumption at normal brightness use (set Brightness < 80) see graph 1
- Driven by **Adafruit NeoPixel Arduino library**
- Each segment of the RGBDigit's primary color can achieve 256 brightness display, completed 16777216 color full color display, and scan frequency not less than 400Hz/s.
- Cascading port transmission signal by single line.
- Send data at speeds of 800Kbps.
- Each 1" RGBDigit contains 8 5050 RGB LED with Integrated Driver Chip

## Safety regulation for proper use

- See section Maximum Ratings for **Absolute Maximum Ratings**.
- Assure yourself that you connect the digit Pin's in the right order see Pin function table.
- Try not to connect the digit's to a live Arduino **ALWAYS POWER OFF**.
- When connecting NeoPixels to any live power source or microcontroller, **ALWAYS CONNECT GROUND** Pin 3 (-) BEFORE ANYTHING ELSE. Conversely, disconnect ground last when separating.  
Note: Try to avoid this situation.
- There is a 330 ohm resistor included in the Di (pin2) line an external resistor is not necessary.
- For more detailed safety/connection data See <https://learn.adafruit.com/adafruit-neopixel-uberguide/arduino-library>
